

# Exercise 2 - Interactive FAQ Section

## 🔗 Objective

Create an interactive FAQ section where users can click on a question, and the corresponding answer will be revealed or hidden.

## HTML File:

You will be given an HTML file.

**Video Demonstration:** [Click here to view the video demonstration.](#)

## Challenge

Your task is to write the JavaScript code to implement an interactive FAQ section as shown in the provided video demonstration. When a user clicks on a question, the corresponding answer should toggle between being revealed or hidden.

## Guidance

- **Identifying Elements:** You will need to select all the FAQ items from the DOM.
- **Event Handling:** Think how to add event listeners to all the question elements.
- **Toggling Answers:** Plan how you will **toggle** the visibility of the answers. Using class manipulation might be a clever way to achieve this.

## Tips

- Think about what happens when a question is clicked.
- Experiment with adding and removing classes to change the appearance of the answers.
